

**Amendments to the Abstract:**

Please amend the abstract as indicated.

[0059]       ~~The present invention pertains to disposing~~ Positioning a diamond-like composition on a template, ~~wherein the diamond-like composition~~ ~~[[acts]]~~ acting as a release layer~~[[. The]]~~, with the diamond-like composition ~~[[is]]~~ being substantially transparent to actinic radiation, e.g., ultraviolet (UV) light, and ~~will also have~~ providing the template with a desired surface energy, ~~wherein the desired surface energy minimizes to minimize~~ adhesion between the template and an underlying material disposed on a substrate, is disclosed. The diamond-like composition is characterized with a low surface energy that exhibits desirable release characteristics.
